

Tidal™ Enterprise Adapter for JD Edwards

Key Benefits

- Leverages your current JD Edwards investment to create a single point-of-control, enterprise-wide application automation solution
- Provides real-time status on JD Edwards jobs with real-time interaction
- Connects JD Edwards to other platforms, other business applications and other JD Edwards instances with unlimited dependencies for broader, integrated workflows
- Reduces training and operational support to one application automation environment
- Provides richer, more advanced scheduling features than the native JD Edwards job scheduler for greater efficiency and productivity

To improve their competitive advantage, businesses are investing in applications that increase operational efficiency, such as ERP solutions like JD Edwards® EnterpriseOne and World. These applications manage critical data from various functional areas including financials, inventory, procurement and order fulfillment. While the JD Edwards internal scheduler does an adequate job of managing the batch processes, it is not optimized for all enterprise-wide scheduling requirements. Custom made by Tidal Consulting Services for an organization's unique needs, Tidal™ Enterprise Adapter for EnterpriseOne/World is the interface between Tidal™ Enterprise Scheduler and EnterpriseOne/World. Together, they provide organizations with robust scheduling functionality including cross-platform, cross-application dependency support, real-time interaction and centralized control.

Simplify Your Work

With the Tidal Enterprise Adapter for JD Edwards EnterpriseOne/World, Tidal Software brings the automation, manageability and reliability of Tidal Enterprise Scheduler to these leading ERP applications. With Tidal Enterprise Scheduler you can easily manage all processes within the JD Edwards EnterpriseOne/World environments from a centralized point-of-control. This translates into reduced training and skill required for scheduling operations, reduced errors and an increase in productivity.

How it Works

The Tidal Enterprise Adapter for JD Edwards EnterpriseOne/ World runs on any Windows machine in the data center that has a Tidal Enterprise Scheduler agent. Once implemented, the Tidal Enterprise Adapter allows users to define, launch, monitor and control JD Edwards processes using Universal Batch Engine (UBE) programs. The internal UBE programs are used to execute JD Edwards defined processes. Tidal Software allows JD Edwards users to resolve failures more easily, incorporate multiple cross-application dependencies and utilize process models for JD Edwards UBE programs. The Tidal Enterprise Adapter technology is able to submit the JD Edwards processes as well as monitor the statuses of each process executed. Furthermore, it can facilitate the distribution of JD Edwards reports through its inherent FTP/ email capabilities. Also, Tidal Software utilizes both UBE programs and the API's in JD Edwards EnterpriseOne/World. JD Edwards function calls are used for the integration, so no modifications to the JD Edwards environment are necessary.

Tidal Enterprise Adapter for JD Edwards

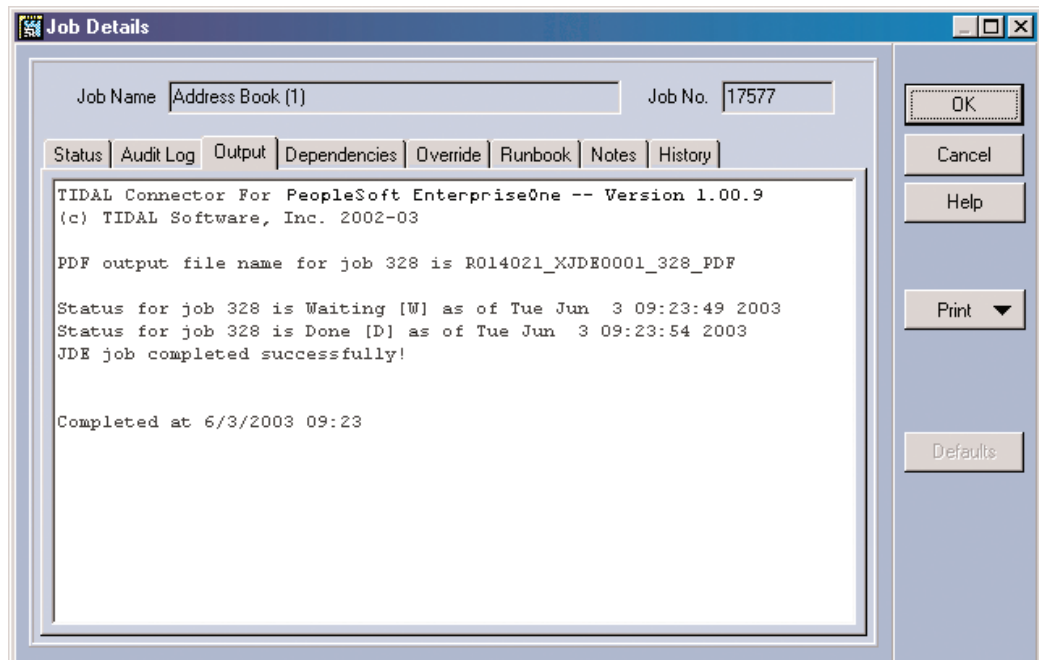

Key Features

- View and interact with JD Edwards processes in real-time
- Support automatic printing to multiple printers in multiple locations
- Schedule a single occurrence or recurring process within JD Edwards
- Set a dependency between a JD Edwards process and a process running on another operating system such as UNIX®, Windows® NT/2000, Linux®, z/OS® and MPE/iX®
- Set a dependency between a PeopleSoft process and a process running in another ERP application such as SAP® R/3, JD Edwards and Oracle® E-Business Suite
- Schedule a JD Edwards process based on multiple types of business calendars
- View the JD Edwards process flow graphically
- Display and manage JD Edwards process output from a central console
- Analyze, report and alert personnel based on various JD Edwards job statuses
- Monitor any files that are used as input to a JD Edwards process
- Manage queues for all JD Edwards processes
- Centralize security administration for all JD Edwards processes
- Capture additional logging information on JD Edwards job
- Change the user or owner of a job after it has run to support departmental functions for JD Edwards

The Complete Solution

Tidal Enterprise Scheduler has been successful at providing greater value and ROI to organizations investing in the JD Edwards technology. Process management is an essential part of an ERP solution as it ensures critical transactions from various systems and applications occur on time, every time. Tidal Enterprise Scheduler provides immediate problem detection and in many cases, automatic resolution so that JD Edwards EnterpriseOne/World data flow is maximized. This enables

operations staff to manage JD Edwards as well as other platforms and applications from one point-of-control, minimizing downtime, reducing errors and thereby enhancing productivity. In today's business climate, companies must do more with less while maintaining service level agreements. The Tidal Enterprise Adapter for JD Edwards EnterpriseOne/World provides the technology necessary to leverage your JD Edwards investment and increase the value of your ERP application.

From a single console, users are able to track real-time status information of their jobs, including critical JD Edwards processes and gain access to audit logs, override functions, and JD Edwards job history.
