Optimize Job Scheduling & Automation in Your SAP Environment

For companies that run their business with SAP, Tidal offers the best solution to orchestrate SAP job scheduling and other application-related processes across the enterprise. With more pre-built adapters for SAP solutions than competitive alternatives, Tidal is the workload automation provider of choice for companies that rely on SAP.

Through our integrations, the Tidal platform takes control of SAP internal schedulers to centralize management of complex workloads across SAP – and more broadly, across other enterprise applications, systems and infrastructure. Tidal knows what is scheduled to run and, in real time, users can put in new tasks, edit or delete existing tasks and control jobs that are running. Businesses using SAP save time and costs associated with managing independent schedulers and optimize their mission-critical business processes with centralized control provided by Tidal’s workload automation solution.

Centralize Your SAP Scheduling

When you integrate Tidal with your SAP solutions, you can expect real results and tangible benefits.

Increase Visibility and Control

The Tidal platform offers a single integrated view across all enterprise workload activities and their relationships with centralized, comprehensive scheduling of both SAP and non-SAP systems.

Meet Service Level Agreements

Our platform manages process dependencies and resolves issues to ensure you meet, or exceed, service level agreements for your organization's SAP business processes.

Accelerate Time-to-value for SAP Solutions

As you adopt new SAP applications and tools, it's easy to automate them with our pre-built adapters integrated with the Tidal platform, without the need for custom scripting or development.

Satisfy Compliance Requirements

Comprehensive audit logs maintain a record of what changes are made to your SAP processes so you can show you have controls in place to comply with various regulations and requirements, such as ISO 27001.

Why Tidal for SAP

There are plenty of reasons Tidal is the provider of choice for businesses that rely on SAP. Here are just a few.

Our integration with SAP solutions is accomplished through adapters, not agents. With our agentless technology, customers don't need to install a Tidal component on their SAP server in order for Tidal to manage the workload automation and scheduling.

We offer a comprehensive set of adapters for different versions of SAP, their legacy and new technology stacks, and a variety of SAP solutions beyond ERP.

Development of new adapters for SAP is reflected in our roadmap and demonstrates our commitment to keeping pace with customer requirements for the ever-evolving SAP solutions landscape. Our adapters go through a rigorous process to be certified by the SAP Integration and Certification Center (SAP ICC), providing confidence and assurance for customers that they have been thoroughly evaluated for use with SAP.

We have proven success in replacing Redwood and other scheduling solutions that are inadequate or no longer cost-effective.

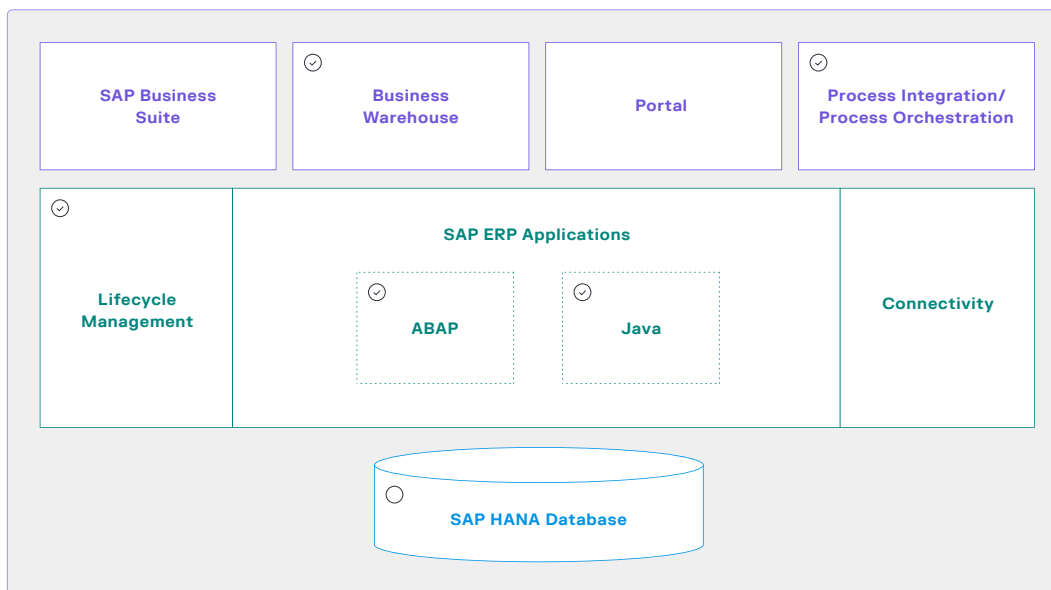

Our client roster includes some of the largest organizations in the world running SAP. These clients count on Tidal to orchestrate their SAP job scheduling and optimize their mission-critical business processes.

Tidal Has You Covered

We have nearly three decades of experience integrating Tidal with SAP solutions. The SAP landscape has evolved a great deal in that time, yet SAP customers are not necessarily moving at the same pace. That's why we support R/3 and S/4HANA versions of SAP, ABAP and Java technology stacks, and a variety of SAP solutions beyond ERP. Tidal can orchestrate SAP workflows whether they are running on-prem or in the cloud.

Tidal Offers Integrations Across the SAP Ecosystem

☑ Tidal Adapter Available ○ Tidal Adapter Coming Soon

LEVERAGE TIDAL AUTOMATION ADAPTERS FOR:

- SAP R/3 ERP (ABAP)
- SAP R/3 Business Warehouse (ABAP)
- SAP S/4HANA ERP (ABAP)
- SAP S/4HANA ERP (Java)
- SAP S/4HANA Business Warehouse (Java)
- SAP S/4HANA Business Warehouse (ABAP)
- SAP BusinessObjects Business Intelligence
- SAP BusinessObjects Data Services
- SAP Financial Closing Cockpit
- SAP Integrated Business Planning
- SAP Process Integration
- SAP Process Orchestration
- SAP Solution Manager

NEW ADAPTER COMING SOON FOR:

- SAP HANA Database

SAP CERTIFICATIONS

The Tidal Automation Adapter for SAP R/3® & SAP S/4HANA® has been certified for integration with:

- SAP NetWeaver 7.52 via the SAP integration scenario BC-XBP 7.20
- SAP S/4HANA 7.5 via the SAP integration scenario
- S/4HANA BC-XBP 1.0
- SAP Business Warehouse 7.50 via the SAP integration scenario BW-SCH 3.0

SAP® Certified
Integration with SAP NetWeaver®

SAP® Certified
Integration with SAP S/4HANA®

What Our Customers Say About Tidal

Some of the largest companies in the world that rely on SAP to run their business are using Tidal's workload automation solution to orchestrate their SAP job scheduling.

“We use Tidal to **run jobs across multiple application platforms**. We have a lot of different connectors, then we bring all these jobs into Tidal so we can set up dependencies between jobs, e.g., an SAP job and an OS/400 job, **allowing a cross-platform job flow.**”

LEEANN MCLENNAN | Application Engineer at Columbia Sportswear

“We use Tidal to run Hadoop, SAP HANA and SAP BusinessObjects but **SAP is the main thing**. The goal is to use Tidal for **managing and monitoring cross-platform, cross-application workloads**. The ability to manage those loads is what they do well.”

SR. PLATFORM ENGINEER at a Major Software Company

“We wouldn't be able to do many of the **complex scheduling** that we do today without Tidal. For us, it is a **mission-critical app**. It is an **essential tool** for us to manage and run SAP jobs.”

TEAM LEAD at a Large Manufacturing Company

“We have **integrations running on multiple platforms**. This is a **valuable feature** Tidal provides compared to other schedulers. What's beneficial for us is that it calls jobs, programs on SAP, and processes on Informatica, Windows Box and SQL Server.”

MOSES GUJJARLAPUDI | Tidal Administrator at Devon Energy

Tidal Automation Provides

simplified orchestration of complex workloads across SAP and other enterprise applications, systems and infrastructure. Centralized control increases visibility and efficiency of your mission-critical business processes. With our broad coverage across the SAP portfolio of solutions, you can rely on Tidal to deliver real business value and optimize your SAP investment.

tidalsoftware.com

Tidal Software is a leading provider of enterprise workload automation solutions for orchestrating the execution of complex workflows across systems, applications and IT environments. With a comprehensive portfolio of products and services, Tidal optimizes mission-critical business processes and drives IT cost efficiencies.
